Carded Bead Cord

...with beading needle attached for fast and simple threading of pearls and stones.

GRIFFIN Bead Cord is more than just any common thread. The threads receive the precise number of twists under optimal tension during their manufacture in order to prevent fraying as well as tangling and knotting. This precision is the key to our world-famous threads and their unmistakable quality.

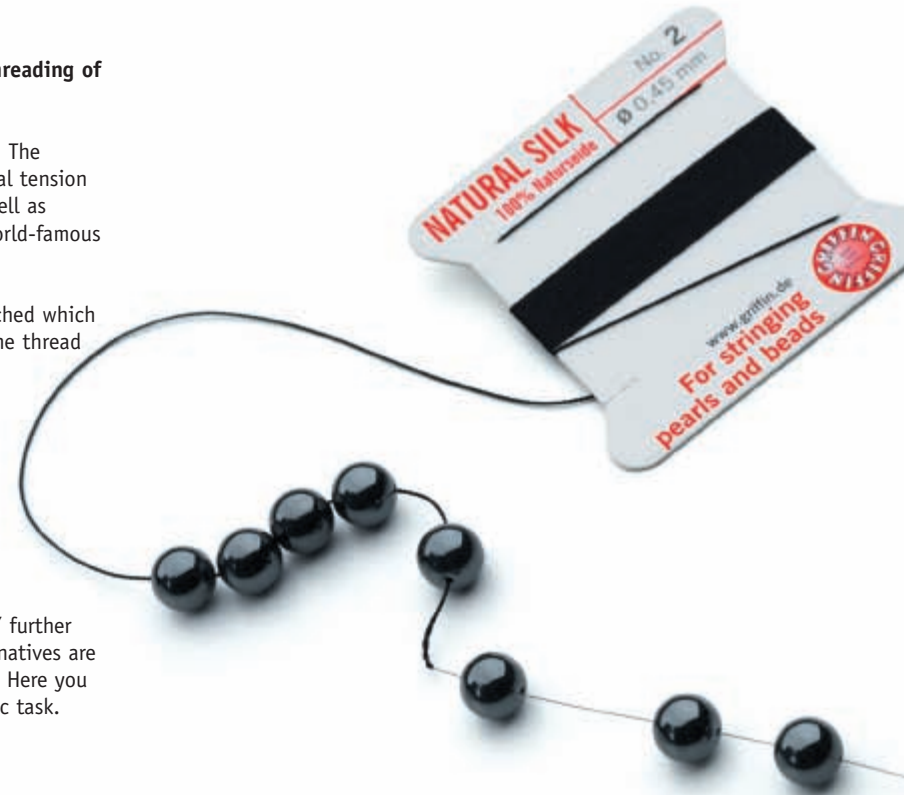

The Bead Cord cards have a special stringing needle attached which does away with cumbersome threading and doubling of the thread during stringing.

There is no simpler, faster or more convincing way to thread pearls, stones or glass beads.

How to thread a bead necklace:

The GRIFFIN brochure on "How to thread a bead necklace" further demonstrates, with easy-to-follow instructions, what alternatives are possible with GRIFFIN Bead Cord and relevant accessories. Here you can find out which technique and tool to use for a specific task.

Brochure with 36 pages in DIN A5 with pictures.

CARDED BEAD CORD

...with beading needle attached

100 % Natural Silk – The best of the best!

Silk has been the traditional material for stringing beads for centuries. Pure natural silk feels incredibly soft and smooth. Silk threads have good tensile strength and little stretch and can therefore be easily worked with and knotted. Necklaces made with natural silk drape naturally around the contours of the body and always project a look of elegance and beauty.

GRIFFIN 100 % Natural Silk is made exclusively from the high-grade filament of the silk cocoon. Only this sleek thread has the characteristic lustre and the irresistible natural beauty of pure natural silk. The best of the best!

GRIFFIN 100 % Natural Silk thread is available in 21 natural colours and 13 different thicknesses. The individual cards have two metres (approx. 79") of 100 % natural thread with a stainless steel needle attached.

PROGRAM 1

100 % Natural Silk with 1 needle attached, length 2 m
- all colours, all diameters

PROGRAM 4

100 % Natural Silk with 2 needles attached, length 2 m
- only in white, diameters 0-12

NylonPower – The modern alternative to traditional 100 % Natural Silk thread.

NylonPower is a strong, specially treated nylon with double the tensile strength of conventional nylon. NylonPower beading cord stretches only about 3 – 4 % under tension and will return to its original length when released. This property is a great advantage when beading, because knots can be placed very firmly and permanently.

Apart from the resilient characteristics of this thread, GRIFFIN NylonPower also possesses a smooth surface and an unsurpassed brilliance.

GRIFFIN NylonPower is available in 21 attractive colours and 13 different thicknesses. The individual cards have two metres (approx. 79") of thread with a stainless steel needle attached.

PROGRAM 2

NylonPower with 1 needle attached, length 2 m
- all colours, all diameters

High Performance – extremely strong with incredible tensile strength

Silk and nylon threads may break if the maximum tension is exceeded during knotting. GRIFFIN High Performance Bead Cord is almost unbreakable – even threads with the smallest diameters. High Performance consists of high-tech fibers with an especially dense molecular structure. Its tensile strength is scarcely believable: even the thread with the smallest diameter cannot be torn apart by hand. These fibers are 15 times stronger than steel and therefore the strongest fibers in the world.

GRIFFIN High Performance Bead Cord is as smooth as silk, pliable and excellent to work with. Because it does not stretch, necklaces and chains do not lengthen with time.

GRIFFIN High Performance is available only in white in 10 different diameters. Each card has two metres of thread with a beading needle attached.

PROGRAM 3

HP High Performance with 1 needle attached, length 2 m
- only in white, diameters 0-10

PROGRAM 5

HP High Performance with 2 needles attached, length 2 m
- only in white, diameters 0-10
