

Bead Cord on spools

GRIFFIN Bead Cord is more than just any common thread. It has been specially designed to create all types of necklaces. The correct twisting of the silk thread is crucial for its strength, flexibility and ease of handling during use. GRIFFIN Bead Cord threads are produced with precisely the right number of twists under optimal tension in order to prevent fraying as well as tangling or knotting. This precision is the key to our world-famous threads and their unmistakable quality.

Our extensive range of colours is based on the natural colours of popular gemstones which enables us to satisfy the choice of even the most sophisticated tastes. GRIFFIN Bead Cords threads distinguish themselves by the consistency and permanence of their colours.

Threading beads and pearls with Bead Cord on spools we recommend using special beading needles. They are made out of twisted wire won't damage the thread, as other needles may do.

- No. 1 Ø 0.15 mm
- No. 2 Ø 0.20 mm
- No. 3 Ø 0.27 mm
- No. 4 Ø 0.30 mm
- No. 5 Ø 0.33 mm
- No. 6 Ø 0.35 mm
- No. 7 Ø 0.38 mm
- No. 8 Ø 0.42 mm

Diameters PowerCord

- No. 1 Ø 0.13 mm
- No. 2 Ø 0.20 mm
- No. 3 Ø 0.25 mm
- No. 4 Ø 0.30 mm
- No. 5 Ø 0.35 mm

How to thread a bead necklace:

The GRIFFIN brochure on "How to thread a bead necklace" further demonstrates, with easy-to-follow instructions, what alternatives are possible with GRIFFIN Bead Cord and relevant accessories. Here you can find out which technique and tool to use for a specific task.

Brochure with 36 pages in DIN A5 with pictures.

BEAD CORD on spools

Jewelry Silk – The best of the best!

Silk has been the traditional material for crafting necklaces. Pure natural silk feels incredibly soft and smooth. Silk threads have good tensile strength and little stretch and can therefore be easily worked with and knotted. Necklaces made with natural silk drape naturally around the contours of the body and always portray a look of elegance and beauty.

GRIFFIN Jewelry Silk is exclusively made from the high-grade filament of the silk cocoon. Only this sleek thread has the characteristic lustre and the irresistible natural beauty of pure 100 % natural silk

GRIFFIN Jewelry Silk Bead Cord is available in 13 natural colours (without beige) and 8 different thicknesses on 8 g or 80 g spools.

PowerNylon – The modern alternative to the traditional 100 % Natural Silk thread.

PowerNylon is a strong, specially treated nylon with double the tensile strength of conventional nylon. PowerNylon Bead Cord stretches only about 3 – 4 % under tension and will return to its original length when released. This property is of great advantage when knotting, because knots can be placed very firmly and permanently.

Apart from the resilient characteristics of this thread, GRIFFIN PowerNylon additionally possesses a smooth surface and an unsurpassed brilliance.

GRIFFIN PowerNylon Bead Cord is available in 14 natural colours and 8 different thicknesses on 5 g or 50 g spools.

PowerCord – Extremely strong with incredible tensile strength.

Silk and nylon threads may break if the maximum tension is exceeded during knotting. PowerCord Bead Cord consists of high-tech fibers with a specially dense molecular structure. Its tensile strength is incredible: even threads of the smallest diameter cannot be torn apart by hand. These fibers are 15 times stronger than steel and therefore the strongest fibers in the world.

GRIFFIN PowerCord is as smooth as silk, pliable and excellent to work with. Because it does not stretch, necklaces and chains do not lengthen with time.

GRIFFIN PowerCord is ideal for pearls and stones with small bead holes, when only a thin thread can be used. No other beading cord, especially with small diameters, has the tensile strength of PowerCord.

GRIFFIN PowerNylon Bead Cord is available in white and 5 different thicknesses on 25 m or 100 m spools.
