Reamers and Tweezers

Use **Bead Reamers** (10) to enlarge, de-burr and round out bead holes in pearls, ceramic beads, glass beads and stones. Each tip is diamond-coated for smooth reaming. GRIFFIN Bead Reamers come with three tips, a large reaming point, a small reaming point and a 45° counter-sink which rounds and smoothes edges so that the beads do not cut through the cords.

The self-closing tip of **Cross-Lock Tweezers** (11) frees up one hand during knotting: it provides the right amount of tension has a smooth inner surfaces and makes handling and effortless holding of smaller items easy.

Pear Tweezers (12) have specially designed cup tips to pick up and hold pearls and stones safely.

The bevelled tips of the **Knotting Tweezers** (13) are designed to position and tighten the knots precisely during knotting without fraying or damaging the cord.

Curved Stringing Tweezers (14) allow perfect workmanship even in places with difficult access.

Tools

For the creation of more complex pieces of jewelry, however, special tools are required. Many jewelry designs and materials require tools which allow precise workmanship and facilitate easier handling. Therefore our tools cannot be compared with pliers and cutters used in conventional trades. They are more delicate and easier to handle.

Do you have further questions on our tools or products?

Doc Griffin is our friendly and competent person to turn to. He will help you with any question you have, threading necklaces and beading jewelry. You are welcome to visit him on our homepage www.griffin.de or send him an e-mail to drgriffin@griffin.de

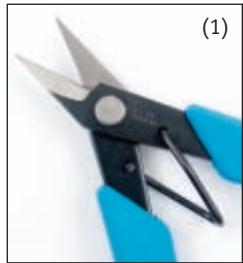

Cutting Tools

The micro-serrated **Bead Cord Cutter** (1) is the perfect and clean solution to cut of all GRIFFIN Bead Cords. This tool can also be used for nylon and high-tech fibers.

High Precision Shears (2) cut Bead Cords with a very precise edge. Due to the special characteristic of the blade, these cutters are not suitable for metal.

Stainless Steel Wires can be attached to the integrated wire clamp of a **Clipper with Retainer** (3) before being clipped – it will not pop out. It is suitable for soft wires up to a thickness of 0.9 mm.

Special Pliers

A **Split Ring Pliers** (4) is the perfect tool for opening GRIFFIN split rings.

If you are looking for a tool making perfect crimps, a **Crimper** (5) is the solution. The two dips of the Crimper enable the shaping of the crimping tube in two stages. The edges of this tool are nice and smooth and allow for a perfect curvature. For all crimps with a small diameter the **Micro Crimper** is a must.

Wire Workmanship

The perfectly precise surfaces of **Round Nose Pliers** (6) make this an ideal tool for shaping Craft Wire.

Chain Nose Pliers (7) are perfect for gripping, holding and bending of all sorts of wire. The polished surfaces prevent scratching of the objects being worked. The semi-rounded shape is ideal for manipulating Craft Wire.

Gripping, holding and bending are made easily with **Flat Nose Pliers** (8). Its polished surfaces prevent scratching of the objects being worked.

A **Side Cutter** (9) is the ideal tool for precision cutting of medium hard wires. It is also suitable for copper wire up to a diameter of 1.2 mm.

Griffin tools for wire workmanship are available in two variants: pliers "professional" made of chrome vanadin carbon steel and pliers "economy".
